SCHWALBE[®]

The new innertube identification system

Schwalbe’s proven innertube system has been modernized. A new, unified code that combines valve type, tube number, width indicator (XS, S, M, L, XL) and an optional suffix makes selection easier – familiar sizes such as 15, 17 and 19 are retained.

A look back

At the end of the 1980s, company founder Ralf Bohle, together with Schwalbe’s longtime production partner Hung A (Korea), developed the innertube system. It was a genuine pioneering achievement: Schwalbe tubes led the field in terms of quality and elasticity. Their exceptional air retention during expansion meant a single tube could cover multiple tire dimensions. For retailers this translated into the need for less storage space, simpler logistics and easier product selection. The production numbers (e.g. 15 for road, 17 for touring) and a color-coded valve system (AV = green, DV = orange, SV = red, RV = yellow) made tube choice straightforward and transparent. The number and color scheme formed a logical, easy to understand system. Schwalbe promoted it enthusiastically, so terms like “tube AV17” quickly became established and almost turned into a brand of their own.

Why the update?

With new products such as the Aerothan tube and a growing range of tire widths, the old system had become confusing over the years. The new system preserves the familiar numbers while creating clear, immediately understandable identifiers.

What's new?

Schwalbe consolidates the variety of tire sizes and specifications into a clear, unified scheme. Each tube designation will now consist of four parts:

- Valve type: SCV for Schwalbe Clik Valve, SV for Sclaverand (Presta), DV for Dunlop, AV for Schrader
- The existing tube number remains the same in almost all cases, e.g. 15, 17, 19.
- A letter after the number indicates tire width: M is the default and is omitted; XS and S denotes narrower tires, L and XXL denotes wider tires
- An optional specification suffix follows a hyphen: EL = Extra Light, AE = Aerothan, AE+ Aerothan Plus, AP = Air Plus

How does it work in practice?

The numbers remain familiar: 15 for narrow road tires, 17 for many touring and gravel bikes, 19 for wider tires (especially in the mountain bike sector). Within each number, XS, S or L, XL indicates whether a tube is suited to narrower or wider tires. Color coding remains in place – and because many butyl tubes are now also available with the Schwalbe Clik Valve, these will receive the color code blue.

Three changes:

- Tube number 21 becomes 14 (SV21=SV14, SV21A=SV14-EL)
- Tube number 16 becomes 15L (SV16=SV15L, SV16A Extra Light=SV15L-EL)
- In addition, the two Extra Light tubes are assigned existing numbers:
SV18 Extra Light ➔ SV17-EL
SV20 Extra Light ➔ SV15-EL

Example:

- Item 15: 18/28-622/630 ➔ 23/30-622/630
- Item 15L (previously 16): 28/32-622/630 ➔ 28/34-622/630
- Item 15-EL (previously 20): 18/25-622/630 ➔ 18/28-622/630
- Item 15L-EL (previously 16A): 28/32-622/630 ➔ 28/34-622/630
